

Global warm

1. Why do greenhouse gases warm the planet?

- ☐ (A) They reflect sunlight
- ☐ (B) They trap heat in the atmosphere
- ☐ (C) They cool the air
- ☐ (D) They increase oxygen

2. Why do greenhouse gases warm the planet?

- ☐ (A) They reflect sunlight
- ☐ (B) They trap heat in the atmosphere
- ☐ (C) They cool the air
- ☐ (D) They increase oxygen

3. Why is deforestation dangerous for climate?

- ☐ (A) Trees release more CO₂
- ☐ (B) Forests increase rainfall
- ☐ (C) Fewer trees absorb CO₂
- ☐ (D) Trees cause pollution

4. What links global warming to extreme weather?

- ☐ (A) Warmer oceans increase storm energy
- ☐ (B) Cold air masses disappear
- ☐ (C) Wind becomes weaker
- ☐ (D) Rain stops completely

5. Why is renewable energy important?

- ☐ (A) It produces more carbon dioxide
- ☐ (B) It reduces greenhouse gas emissions
- ☐ (C) It increases pollution
- ☐ (D) It melts glaciers

6. Why is global warming considered a long-term threat to economies?

- ☐ (A) Because it only affects tourism
- ☐ (B) Because it reduces internet access
- ☐ (C) Because it makes winters shorter
- ☐ (D) Because it damages agriculture, infrastructure, and increases disaster costs

7. Global warming can increase extreme weather events.

- ☐ (T) True
- ☐ (F) False

8. Renewable energy sources help reduce climate change.

- ☐ (T) True
- ☐ (F) False

9. Climate change only affects animals, not humans.

- ☐ (T) True
- ☐ (F) False

10. Explain how global warming affects human health.
